

# Screening

---

1. You will prospectively and consecutively enroll patients in the study. Beginning on the first day of data collection, record all patients admitted to your ICU on or after that day in your screening log.

*Note:* Study Day 1 is the date of ICU admission, regardless of when the patient is screened. *Example:* if you screen a patient on November 3, and they were admitted to ICU on November 1, you need to collect data from November 1 until November 12

*Note:* If charts are missing and you are unable to collect the relevant data for this patient, please exclude this patient and include the next eligible patient.

2. Screening log columns represent eligibility criteria for purposes of data collection. Place a ✓ in each column where a patient meets the eligibility criteria, or an × if the patient does not meet that criteria. You will not know if a patient is eligible until 48 hours after ICU admission (exclude patients that die within 48 hours). Collect data on all patients who meet all eligibility criteria. If the number of patients meeting inclusion criteria is <30, continue to screen daily until you have at least 30 consecutive patients.

*Note:* **Consecutive** means the very next patient that meets the criteria, instead of picking and choosing patients.

3. If a patient has had several admissions to the ICU, use the **most recent** admission.
  - a. If a patient you collected data on is later readmitted to the ICU, do not screen them a 2<sup>nd</sup> time.
  - b. If a patient you are collecting data on is discharged but readmitted within 48 hours consider it as if this patient never left the ICU (and continue collecting data on them)
4. Use additional pages of the screening log as necessary. Number the pages at the bottom. When the page is the last of the series, check the box:

Page number: _____ Check box if this is the last page of the screening log: <input type="checkbox"/>
---

5. Record the REDCap patient number on the screening log.

*Important:* The patient number and screening number will **not** be the same. The patient number is automatically generated by REDCap.

6. Please keep the screening log to help track down which patient corresponds to which patient number in case we have data queries at a later date.

## Enroll all patients meeting the following Eligibility Criteria:

Inclusion	Exclusion
<ul style="list-style-type: none"> <li>○ Adult patients (≥18 years)</li> <li>○ Mechanically ventilated within 6 hours of admission to the ICU</li> </ul> <p><i>Note:</i> Duration of mechanical ventilation does not matter. Patients already mechanically ventilated when admitted to ICU are eligible.</p>	<ul style="list-style-type: none"> <li>○ Enteral or parenteral nutrition initiated before ICU admission</li> <li>○ Patients on mask ventilation</li> <li>○ Moribund (as evidenced by death within 48 hours of admission to ICU)</li> </ul>

# Screening Log

This log is for your own reference and will not be entered online. However, you may be asked to provide the total number of patients from each column of your screening log. Please use additional copies of this page as necessary.

Screening number <i>(for your reference only)</i>	Patient initials for all patients admitted to ICU on/after first day of data collection	Patient is ≥18 years old	EN and/or PN not initiated prior to ICU admission	Patients intubated and ventilated within the first 6 hours of admission to ICU <i>(exclude mask ventilation)</i>	Patient did not die within 48 hours of ICU admission	Patient eligible?	REDCap Patient number <i>(automatically assigned online)</i>
