### 60-day Outcomes

---

*All outstanding issues must be addressed before you can access this page. The outstanding issues will appear at the top of the Patient Status Page*

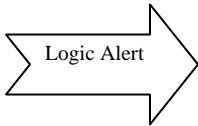

This form is to be completed upon discharge from ICU/hospital or if the patient dies. This form is to be completed once for each patient. You may need to wait until day 60 (from admission to ICU) to complete some of the questions.

- On the Patient Status Page under Outcomes and Follow-up select '**Finalize Patient**'. You will be directed to the Outcome page.
- **Enteral/Parenteral Nutrition First Initiated:** Indicate when EN/PN was initiated.
  - If started prior to ICU admission and continued in ICU, date and time of enteral nutrition started will become ICU admission date/time.
  - If initiated in ICU, record the date and time enteral nutrition was started in ICU.
- "Did patient die in hospital/ICU?" "Yes" or "No"
  - **If "Yes":**
  - You will be prompted to provide date and time of actual death.  
**Note:** Death date & time will be same as Hospital & ICU discharge date and time, therefore you **do not** complete the date fields, simply indicate that hospital/ICU discharge date same as date of death.
  - If "No"
  - You will be prompted to indicate if the patient is still in ICU or hospital at day 60 (from admission to ICU). If the patient was discharged, you will be prompted to enter hospital/ICU date and time.
- When was mechanical **ventilation discontinued in the ICU?** Indicate when mechanical ventilation discontinued.

*If patient is discharged from ICU while still ventilated (for example, transfer to step-down unit or transfer to another hospital), discontinuation date and time of ventilation is same as ICU discharge date and time. In addition, please make a comment in the Comment Box describing the situation.*

*Death or ICU/hospital discharge marks the end of data collection. We are not asking you to follow-up for 60 days after discharge home or transfer to another healthcare facility.*

- Click '**Finalize Patient**' to save the form and be directed back to the patient status page. If there are outstanding queries on the Outcome page, the patient's status will be listed as 'in progress' on the patient status page. If the patient was finalized successfully, the patient's status will be listed as 'finalized' on the patient status page.

If ICU discharge date is not consistent with the duration of the daily data that you have entered, an input warning will be generated, as follows  
*"Date EN initiated does not match observation data"*  
You may either correct the ICU discharge date or enter additional daily data to the end of the study period
