

The REDOXS® Circular

Enrolment as of May 31, 2009

Site	May	Cumulative Total	Site	May	Cumulative Total
Kingston General	3	56	Sunnybrook, Toronto	-	2
St. Joseph's Healthcare	1	30	St. Paul's, Vancouver	-	6
Ottawa General	6	86	L'Enfant Jesus, Quebec City	1	18
Ottawa Civic	2	36	Liege, Belgium	-	3
Vancouver General	1	18	CHUV, Switzerland	-	8
Sacre Coeur, Montreal	3	44	Royal Jubilee, Victoria	-	5
Royal Alexandra, Edmonton	-	15	UZ Brussels	-	2
Maisonneuve—Rosemount	-	12	Mount Sinai, Toronto	2	14
Grey Nun's, Edmonton	-	11	University of Colorado	2	8
Victoria General	-	3	Miami Valley, Ohio	-	2
London Health Sciences Centre	-	10	University of Louisville	1	7
Health Sciences Centre, Winnipeg	-	8	Fletcher Allen, U of Vermont	-	3
Queen Elizabeth II, Halifax	-	7	St. Boniface, Winnipeg	-	-
*Montreal General	-	7	*Royal Victoria	-	8

* Sites status = on hold due to staffing issues

Total = 509 (includes 80 from pilot)

Enrolment News

What a competitive group!!! The 500th Patient Challenge met with much enthusiasm, great banter and better yet, the REDOXS® community supporting each others efforts. The 500th patient was enrolled by the team at the Ottawa Hospital General Campus. Sites who enrolled patients leading up to the 500th patient include: Kingston General, St. Joseph's Healthcare, Ottawa General, Ottawa Civic, Vancouver General, Sacre Coeur, Capital Health, Enfant-Jesus, Royal Jubilee, University of Colorado, University of Vermont and University of Louisville.

Great work!

22 patients were enrolled in the month of May. Let's continue to strive to enroll 2 patients per month at your site.

REDOXS© Around the World

In the coming months we anticipate additional sites will begin screening patients in Canada, the US, Germany and Switzerland. **The REDOXS© Study is truly an international affair!**

EDCS Additions

- (1) Microbiology taxonomy: Fungi/Yeast → Blastomyces → dermatitidis
- (2) Nutrition Taxonomy: NESTLE → Resource Beneprotein Powder

- (3) *Daily Nutrition: There is now an option for sites to indicate if lipids were not given. Instead of using the "other" option, please use this newly added option.

Type of Lipids

- (4) *No quantitative results for BAL cultures: For BAL samples where no quantitative results are reported, there is now an option to enter a result of "none".

* Regarding #3 & 4, the Methods Centre will change any previously entered data to correspond to the new response options, if applicable. Please ensure you are using these new options from this point forward.

Sample Type

Organisms

Enterococcus / , Results:

Organism

species

sub-species

Quantitative Results:

The following ICU interventional studies are eligible for co-enrolment with REDOXS© study:

Co-Enrolment

ABLE Study

OSCILLATE Study

ABATE Study

If you have any questions regarding co-enrolment of a REDOXS© patient please contact the Project Leaders.

Scoring Child's Class C Liver Disease

When assessing a patient for exclusion criteria # 13 Cirrhosis, ensure you use prothrombin time (PT) to score the patient. Partial thromboplastin time (PTT) should not be used.

Outcomes

Hospital Outcome

For patients who are still in hospital 6 months following randomization (i.e. not discharged to a rehab or palliative floor and status not changed to 'alternate level of care') then the hospital discharge should be recorded as the date/time at 6 months post randomization. Please make a note in the comments field of the Hospital outcome form that the patient was still in the hospital at the 6-month follow-up. On the EDCS leave the discharge date/time field blank. *3 & 6-Month Follow-up should still be completed.*

3 & 6-Month Follow-up

For patients where circumstances prevent the study coordinator from contacting them directly to answer the SF-36 at 3 & 6 months (e.g. mental status change, incarceration), sites are asked to attempt to contact a family member or health care professional that may have access to the patient.
